

Understanding time estimation

Multiple choice exercise

Identify the method

Select the time estimation concept that matches the scenario from your house construction project.

Project scenario

You plan five days for your painters to complete the interior painting tasks. To calculate when your team should start painting in order to be done on time, you count back from the project completion date. This gives you your latest start and finish dates for painting.

Select the concept

- Effort estimation
- Task buffers
- Backward pass
- Capacity planning
