

# Understanding time estimation

Multiple choice exercise

## Identify the method

Select the time estimation concept that matches the scenario from your house construction project.

### Project scenario

You need to ensure the framing is complete within the next seven days so that the electrical installation can begin. As you take inventory of your resources, you realize that although you have the materials, you do not have enough framers to complete the job in seven days (if they work standard, 8-hour days). To meet the deadline, you can request approval from the homeowner to authorize overtime pay, or inform the owner that there will be a delay in the electrical installation.

### Select the concept

- Task buffers
- Project buffer
- Capacity planning
- Network diagram
