

Gathering data for a project

Video: Introduction: Data-informed decision-making
Review: Common types of data

Identify common types of data

Flashcard exercise

How would you define and visualize the metric?

Each flash card will show a metric. Think about whether the metric measures productivity or quality and how to define it. Then, select **See answer** to see an example and find out if you're right. Be sure to review all seven cards.

Metric

Projection

Description

A **projection** is a productivity metric. This metric helps you analyze current information to predict future outcomes.

Hide example

Example

A project manager might use a spreadsheet and its built-in charting tools to analyze current productivity data and make projections about future productivity trends.
