

Gathering data for a project

Video review: Common types of data for decision-making

Identify common types of data

Flashcard exercise

How would you define and visualize the metric?

Each flash card will show a metric. Think about whether the metric measures productivity or quality and how to define it. Then, select **See answer** to see an example and find out if you're right. Be sure to review all seven cards.

Metric

Task

Description

A **task** is a productivity metric. Project managers assign tasks to project team members for them to accomplish within a set period of time.

Hide example

Example

Work management software like Asana can help project managers create and assign tasks. They can also generate reports to track their team's productivity over time.
